

Corrigendum

● In the article, “Studies of Three New Genes, Linkage, and Epistasis in Lettuce,” by Edward J. Ryder [J. Amer. Soc. Hort. Sci. 114(1):129-133, Jan. 1989], the author wishes to note that Table 4, showing evidence for linkage between genes for *plump involucre* and *male sterility*, was incorrect. The expected numbers for fertile-normal, fertile-plump, sterile-normal, and sterile-plump are 411, 109, 141, and 37, respectively. The linkage χ^2 is correct, and repulsion phase linkage is indicated.
